

OFFICE OF THE CORONER — DEBT DIVISION

THE STATEMENT AUTOPSY

Free worksheet · Debt Autopsy

CASE FILE: YOURS

1 THE BODY — FROM YOUR STATEMENT

Card nickname (never write account numbers on paper)

Balance owed $

APR %

Minimum payment $

Statement closing date

Due date

2 THE AUTOPSY — DO THE MATH

STEP 1 What one day of this debt costs:

Balance × (APR ÷ 100) ÷ 365 = $ _____ per day

STEP 2 What this cycle costs:

Daily cost × 30 days ≈ $ _____ in interest

STEP 3 What actually touches the body:

Minimum payment − interest this cycle = $ _____ to principal

If that number is small, the minimum is working exactly as designed — for them.

STEP 4 — NOTE: Interest is charged on your AVERAGE daily balance, not the balance on your due date. Every day a dollar sits there, it feeds.

3 THE MOVE

Pay on the statement closing date, not the due date.

My closing date is the _____ of the month. From now on, my payment lands on that date.

Same money. Smaller feast. A payment made on day one stops feeding interest on day one.

4 CORONER'S VERDICT

- ☐ My minimum barely covers the interest.
- ☐ My payment has been landing on the due date.
- ☐ I found my closing date on the statement.

ZERO IS COMING.

Educational worksheet, not financial advice. Your statement, your numbers, your call. This sheet asks for no personal information — keep it that way.
